On 8/8/09 after cutting grass on a riding lawn motor for 2 hours I went to urinate and was **passing blood**. I went to my regular Doctor and he immediately made an appointment to Dr. Lange of urology group of Fort Smith. After they scooped my bladder **they found a massive cancerous tumor in my bladder**.

The next day I was in surgery to remove it. **They could not get it all** for fear of getting in to the bladder wall. A month later they went back in to surgery with success; two months later one more time to clear it up again. **They suggested a chemo treatment** for the bladder.

In the meantime I became acquainted with Dr. Jerry Vin who lived across the street from US. I **started on Poly-MVA as recommended**.

I **did not take the chemo treatment!** I have had **periodic exams** every 3 months, then six months. **It has not reoccurred!**

For the **last 6 months I am now using poly mva** in a maintenance dose every day. I am so pleased to have the peace of mind that I am doing something positive for my system that through the continue **maintenance program!**

Thank you Amarc Enterprises and your cancer research program,! I am 75 years and still alive.
