I was diagnosed with **stage 3C ovarian cancer in April 2001**. Since then, I've undergone several **surgeries and chemotherapy**. I started taking **Poly-MVA in May 2006**.

In the beginning I felt concerned about the Poly-MVA; what would I expect with this new approach?

I saw the results of my **CA 125** (tumor marker for ovarian cancer) **begin to rise** so I **doubled the dosage of Poly-MVA** and **my CA 125 went back down**.

My CT scan in **November 2006** showed **two metastatic para-aortic lymph nodes**. I underwent **surgery in December 2006** and something great happened - **no malignancy was found during the procedure!**

It was a miracle and **I feel the responsible parties** are God and Poly-MVA."

Julia is still taking Poly MVA on a maintenance level.
