“On my birthday, **January 6, 2006**, I went for a routine mammogram that was far from routine. A **spiculated mass, 2 cm in diameter**, was found by ultrasound after the mammogram. Dr. Alison Estabrook, best breast surgeon in the world, did the fine needle aspiration, found the tissue cancerous, and **did a lumpectomy on January 26, 2006....**

Since I refused chemotherapy (I think it is barbaric and far too destructive), the hospital did a body-wide search for additional cancer. **They found a renal cell carcinoma**, 1.7 cm, on the outer curve of the left kidney. I had suspected a cancer when I had shingles four times in 1996. I had a full body CT scan and **they found a 5 mm. lesion on the left kidney** (soft lesion).

To be sure, I had the test repeated in 2002 and they found NOTHING. Now, **four years later, they find a large renal cell carcinoma**. My radiation oncologist at MSK was Durgesh Hajela. Her fellow doctor, Karen Schupak, ordered the technicians to force the bones of my shoulder into an untenable position for **radiotherapy that caused permanent nerve damage** in my shoulder. Two more times, they repeated this process. My whole 220 pound body levitated off the table as if jolted by defibrillator paddles. My arm flew in painful jerks in every direction as the nerve remained caught between the bones. **I told them and they agreed, that I could not endure such treatment.**

I tried to find an integrative approach. The Cancer Treatment Center in Philadelphia offered mammotome therapy (balloon inserted and isotope placed in balloon twice a day) but my insurance would not pay enough of the cost. St. Barnabas Hospital offered mammosite therapy but Alison Grann, radiation oncologist, said the protocol was very strict and it had been too long since my surgery. **Scar tissue had already filled in the space where the tissue had been removed.**

As soon as I was diagnosed, **I began a cancer diet and went on the Mannatech System**, with daily Ambrotose, Manna Cleanse, ImmunoStart, omega3 supplements, **no white sugar or flour**, lots of fresh fruits and vegetables.

My Poly-MVA arrived just in time for the first radiation treatment, on Thursday, June 8th. I have increased from a **once-a-day dose of 1 teaspoon** to a **twice a day dose of 4 teaspoons**. I take each teaspoon with **15 drops of LiquSorb CoQ10**. I also take Vitamin B 50 mg; calcium gluconate 600 mg. calcium, with 200 iu. Vitamin D2 twice a day; L-carnitine 500 mg.; Mannatech GI Pro; Plus (amino acids); and Arthrosoothe (turmeric) from PNE.

I use Xylitol as the sweetener if I have a recipe that needs one. I also take a multi- vitamin and 1000 mg. of Vitamin C; Vitamin E with selenium food complex 50 iu.; zinc gluconate 50 mg., chromium piccolinate 0.1 mg, Vitamin B12 .1 mg., three tablets of potassium gluconate, one with each meal, 90 mg. potassium; one DHA from Norwegian fish oils, 500 mg; CoQ10, one 100 mg., with lunch. Recently I added Epicor, DIM, serrapeptase (a fibrin digester) and artemisinin (at first I took one a day but recently the Poly-MVA site has recommended nine a day). I just added Vitamin D3 to the regimen, starting at one 1,000 iu capsule a day. I would love to liberate the calcium in all the strange calcifications of the breast and other organs.

Dr. Fleishmann, my pharmacology advisor at Roosevelt Hospital says **I probably did not have to have the kidney cancer treated at all**. I saw Aaron Katz at Columbia Presbyterian Hospital about having it cryo-ablated. The surgery was successfully completed, with Jaime Landman as chief surgeon, on August 4th, 2006.

Dr. Nader Fahimi met with me again on September 18th and my shoulder reconstruction was scheduled for October 12th, 2006. I saw Dr. Johnson again on July 14th, August 8th and October 3, and once a month since then.

I saw Dr. Estabrook again on July 7th (she said all looked well and scheduled my next mammo for January 8th, 2007). My follow-up visit with Dr. Evans was on September 12th and December 10th. He said all looked well. **On January 8th they took NINE films of the right**

breast. I was furious because this is **alpha radiation that they use and very highly ionizing.** I told them they missed seeing the tumor altogether for three years and **NOW, with the tumor removed, they take NINE films.** Each alpha particle **strips two electrons from the cell tissue and is highly damaging to DNA.** Sure enough, after a couple of weeks, **I noticed proliferation of the cells that had remained after the surgery.**

I upped my Poly-MVA dose to 20 tsp. a day for a week, added nine artemisinins per day and used the skin cancer cream again for two weeks. I think I clobbered it nicely and it is in its death throes (again). **The breast surgeon again pronounced the breast fine, perfect, beautiful.** The radiation oncologist was visited on March 13th, 2007 and **he said my efforts appeared successful and could find nothing remaining from the latest proliferation.** And that's all she (I) wrote! Holding you all in love and prayer.

6- 28-2010

Greetings all. What a blessing the Poly-MVA Yahoo group has been. From them I learned about the proper **50,000 international units of Vitamin D3 that I should take per week.** My mammograms used to show very dense fibrocystic tissue. It was like trying to look through 'old ice' on the surface of a lake. After taking the proper Vitamin D3 and adding iodine (through organic kelp), the view is now as though through 'black ice' (no fishes visible beneath MY ice, however).

With us, every thought and breath is to BEAT it. **Poly-MVA and you....perfect together!!** Everyone in the group has given me not just hope but confidence. **Any newbies out there....this stuff works!** It stuns me that **doctors and cancer patients can pass by this opportunity.**

11-12-2012

I had learned about Poly-MVA originally in the Susan Lark newsletter from my sister's friends who are both doctors. To backtrack, I had been diagnosed with breast cancer in 2006. I had a lumpectomy, radiation. **I also had kidney/renal cell carcinoma which was unaffected by Poly-MVA.**

In 2012 I had two large and deep skin cancers on my right thigh. **I used Efudex on the surface and Poly-MVA.** Within about 2 weeks the cancer lesions on my leg were about gone. in fall of 2012, a large patch of skin (4 sq. inches) on my left jaw suddenly turned to mush. I said to myself 'Uh oh! It's a stage of basal cell carcinoma.' I then headed right to the bottle of Poly-MVA. I didn't want to use Efudex or it would leave a large purple/red reaction area for a long time. **Three weeks into Poly-MVA there is only a low uninflamed scab** left. Hooray!

Poly-MVA's support wins another one for me. There's nothing like it. I feel so blessed to have it available. **My current Poly-MVA dose is 2 tsps a day with 15 drops of LiqCoq10 at breakfast.** I truly believe that Poly-MVA has contributed to my health and recovery. **Every day I recommend Poly-MVA to others.** I would tell others" Stop being a disbeliever and try it for a few weeks...then you will know it worth every penny and gives the greatest peace of mind. Have no fear Poly-MVA is here!"

Spoke to Judy and there is **no indication of cancer in her body.** She knows Poly worked. She was taking 2 tsp a day until January and then stopped. However, she said she has some and **promised to do at least 1 tsp a day for maintenance.** She promised to be more consistent and told me she was so glad to hear from me.
